WRITING METHODS ASSIGNMENT
DOCUMENTING ASSIGNMENTS 1 & 2

From this point forward each of the classes and methods that you write should include a JavaDoc comment above them!

Read the instruction is "Documenting Your Code" then add JavaDoc comments for the first two assignments of the Writing Methods Unit.

You will find sample JavaDoc comments for the `Numbers` class, the `randomNumber()` method and the `isEven()` method below:

```java
package myLib;
/**
 * Contains useful methods for dealing with numbers
 * @author Last, First (Period X)
 * @version Month Day, Year
 */
public class Numbers {
    /**
     * A General Description Goes Here
     * @param from A description of valid values and what they do
     * @param to The same thing you just did!
     * @return a integer value between <code>from</code> and <code>to</code> inclusive.
     */
    public static int randomNumber(int from, int to) {
        // Note: This method is incomplete and DOES NOT work!
    }
    /**
     * This method tells the user that ALL numbers are even
     * @param num the number to check
     * @return true if the number is an even number
     */
    public static boolean isEven(int num) {
        // Note: This method is incomplete and DOES NOT work!
    }
```
